                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Ъ
                         testis-specific polypeptides and the nucleic acids encoding them. CC Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the CC transgenic animal expressing the nucleic acids, antisense molecules for detecting the nucleic acids, antisense molecules (for the nucleic acids and methods of isolating modulators of the CC proteins. Compounds that modulate the prostate specific or testis specific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign prostatic hyperplasia, acute prostatitis, testicular cancer, cc proteins, undescended, retractile, ascending or vanished testis. Other proliferative disorders for which the modulators may be cused include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The CC present sequence is prostate specific protein, Six-Transmembrane cover.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        AAU10188
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        RESULT
                                                                                                                                                                                                                                                                                                                                                   New polynucleotide for the diagnosis, prevention and treatment for prostate and testis disorders, particularly prostate cancer, compr prostate-specific or testis-specific nucleic acids

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present sequence is human six transmembrane epithelial antigen of CC the prostate (STEAP)-2 protein. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is located on CC chromosome 7q21 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian CC and pancreatic) expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient, comprises administering a vaccine composition to the patient. Treating a patient with a cancer that CC expresses STEAP, or inhibiting growth or killing cells expressing STEAP, or inhibiting growth or killing cells expressed STEAP, or inhibiting growth or killing cells expressing STEAP, or inhibiting the patient with a cancer that CC comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, CC such that the vector delivers the single chain monoclonal antibody coding sequence to the cancer cells and the encoded single chain monoclonal antibody is expressed intracellularly.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Query Match

                                                                                                                                                                                                           The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them.

Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the protein acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or testis concertific polypeptide are useful to diagnose, prevent or treat disorders of the testis or prostate particularly prostate cancer, benign constatic hyperplasia, acute prostatitis, testicular cancer, prostatic hyperplasia, acute prostatitie, ascending or vanished testis. Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, breast cancer, pancreatic cancer, liver cancer and lung cancer. The present sequence is prostate specific protein, Six-Transmembrane
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    δ

```

polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tage for identifying expressed genes. (I) is useful in gene therapy techniques.

(II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Š
                      The present sequence is an alternative version of human six transmembrane epithelial antigen of the prostate (STEAP)-2 protein. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is located on chromosome 7q21 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient, comprises administering a vaccine composition to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and the comprises the variable domains of the heavy and the comprises the variable domains of the heavy and the comprises the variable domains of the heavy and the comprises the variable domains of the heavy and the comprises the variable domains of the heavy and the comprises the variable domains of the comprises the variable domains of the heavy and the comprises the variable domains of the heavy and the comprises the variable domains of the comprises the variable domains of the patient comprises the variable domains of

Note: This sequence is stated to be the same as that being shown as SEQ ID NO:8 (AAED2781) in figure 9A-9C of the specification. However the present sequence lacks several amino acids at its N-terminal end and has additional amino acids at its N-terminal end the sequence shown in figure 9A-9C.

The p-HYDE gene is associated with the regression of tumour growth in vivo, the induction to susceptibility to apoptosis caused by UV or chemotherapy induced DNA damage and prevention of DNA repair with the upregulation of apoptosis as the result of UV damage and the failure to repair DNA. The present sequence may be used to treat cancer, preferably melanoma, lymphoma, leukaemia, prostate,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Claim

The DME can be expressed by star recombinant methodology. DMEs and their agonists and antagonists are useful for the diagnosis, treatment, and prevention of autoimmune/inflammatory, cell proliferative, developmental, endocrine such as aneurysm, eye, metabolic, and gastrointestinal disorders, including disorders and infection. The present sequence represents a human DM

                                                                                                                                                                                               The invention relates to substantially pure prostate-specific or testis-specific polypeptides and the nucleic acids encoding them.

Also included are vectors and host cells expressing the proteins, a transgenic animal expressing the protein, antibodies against the proteins, probes for detecting the nucleic acids, antisense molecules for the nucleic acids and methods of isolating modulators of the proteins. Compounds that modulate the prostate specific or treat disorders specific polypeptide are useful to diagnose, prevent or treat disorders prostatic hyperplasia, acute prostatitis, testicular cancer, benign cryptorchidism, undescended, retractile, ascending or vanished testis; Other proliferative disorders for which the modulators may be used include lymphoma, leukaemia, melanoma, ovarian cancer, The present sequence is a prostate specific protein, Six-Transmembrane

The present invention describes primer sets for synthesising 5602 (c) full-length cDNAs defined in the specification. Where a primer set (c) comprises: (a) an oligo-dT primer and an oligonucleotide complementary (c) to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the coligonucleotide comprises at least 15 nucleotides; or (b) a combination (c) of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end (c) sequence and an oligonucleotide comprises a 1-east 15 nucleotides and the combination of coligonucleotide comprises at least 15 nucleotides and the combination of the 5'-end sequence/3'-end sequence is selected from those defined in c) the specification. The primer sets can be used in antisense therapy and comparise therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers are also which the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length CDNAs easily without any specialised methods. AAH03166 to AAH13628 and C canabs9893 represent human clud sequences; AAB92446 to CC AAB95893 represent human amino acid sequences; AAB92446 to AAH13632 crepresent oligonucleotides, all of which are used in the exemplification of the present invention.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              В
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               밁
                                         composition to the patient. Treating a patient with a cancer that composition to the patient. Treating a patient with a cancer that expresses STEAP, or inhibiting growth or killing cells expressing STEAP, comprises administering to the patient a vector encoding single chain monoclonal antibody that comprises the variable domains of the heavy and light chains of the monoclonal antibody that specifically binds to STEAP, such that the vector delivers the single chain monoclonal antibody coding sequence to the cancer cells and the encoded single chain monoclonal antibody is expressed intracellularly.

Note: The present sequence is stated as being the same as that shown as SEQ ID NO:10 (AABD0236) in sequence listing of the specification. However
                                                                                                                                                                                                           The present sequence is human six transmembrane epithelial antigen of the prostate (STEAP) 3 protein. STEAP is a member of cell surface serpentine transmembrane antigens. STEAP-2 gene is located on chromosome 7q21 and is used in gene therapy. Inhibiting the development or progression of a cancer (eg. prostate, colon, bladder, lung, ovarian and pancreatic) expressing STEAP or inhibiting growth or killing cells expressing STEAP in a patient, comprises administering a vaccine
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Human; cytostatic; antiproliferative; vaccine; gene therapy; six transmembrane epithelial antigen of the prostate-3; STEAP-3; chromosome 7q21; cancer; prostate; colon; bladder; lung; ovarian;
